

## The Things Conference 2020

[The world's biggest LoRaWAN® conference](#) is returning to **Amsterdam on January 30 & 31 2020**. Over 2000 professionals from 50+ countries will come together to meet the industry leaders, boost their IoT skillset and do business with the relevant players in the ecosystem. This will be the third edition of the conference organized every year by [The Things Industries](#), a LoRaWAN Network Server Provider.

Last year, Wifx was already part of The Things Conference and our team met a lot of interesting people, talked about innovation and the future of the LoRaWAN. It has been a constructive and rewarding experience. For sure the best place to meet the key actors of this fast-growing market.

Next year, the entire LoRaWAN ecosystem will experience the latest innovations, trends and use cases in the market through keynotes, workshops and interactive sessions. Join The Things Conference 2020 to learn what the future of LoRaWAN has in store for you.

Wifx is a proud sponsor of The Things Conference 2020. As last year, multiple LORIX One gateways will be offered to lucky IoT enthusiasts.

We will be happy to present you the new software solution designed to run on the LORIX One gateway and which includes a graphical and reactive web interface. With just a few clicks, the gateway can be configured and updated remotely.

The Things Network infrastructure is already supported on the actual version but be sure the experience will be even better with this new interface.

Feel free to drop by our stand to discuss anything related to LoRaWAN, our LORIX One gateway or our new software solution!
